

Dedicated to conducting clinical trials in various specialties

The IIC MDP has experience conducting high-quality studies with a large recruitment capacity. Its equipment and staff training allow for the conduct of Phase II to IV trials. Its members have been conducting clinical trials since 1996 and have conducted more than 300 studies. The IIC was inaugurated in 2006 and has passed inspections by ANMAT, FDA, EMA, and CDE (China) with no observations. The Institute's director is Dr. Ignacio MacKinnon, and he, along with medical specialists in different areas, data entries, study coordinators, technicians, and administrative staff, forms the permanent staff. The IIC performs sample extraction, processing, preparation, and shipment to central laboratories. The technicians are trained and certified in accordance with IATA standards. When clinical analysis is required at the local laboratory, it is performed by FaresTaie Laboratories, a prestigious laboratory in our city that operates under ISO 9001 and ISO 14001 Certified Quality Standards. It also has a Institutional Review Board (CEI-IIC), chaired by Dr. Jesús Vázquez, which is responsible for the programming, development, and monitoring of research activities. Our building and administrative structure are designed for outpatient clinical trials, where healthcare and research activities are carried out.

SPECIALITIES

- CARDIOLOGY
- DIABETES AND METABOLISM
- HEPATOLOGY
- INFECTIOUS DISEASES
- INTERNAL MEDICINE
- PSICHIATRY
- PULMONOLOGY
- NEUROLOGY
- NUTRITION
- RHEUMATOLOGY

OUTPATIENT OFFICES | NURSING AND BLOOD EXTRACT ROOM | RESTRICTED-ACCESS PHARMACY | MEDICAL RECORDS ARCHIVE | EMERGENCY TEAM | MONITORING ROOMS | LABORATORY | MODERN BUILDING | CHEMOTHERAPY ROOM

SPONSORS & CROS

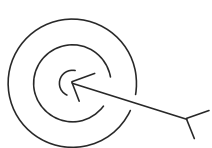

POPULATION

Mar del Plata and its surrounding areas encompass a population of more than 1 million, most of whom have never participated in clinical trials. Chronic diseases are as common as in the northern hemisphere.

The population is concentrated in cities with easy access to medical care and good record keeping of medical events.

For each new study, intensive recruitment programs are activated through a broad network of referring physicians and the exploration of our own databases. The warm physician-patient relationship results in individuals motivated to enroll in clinical studies. Referring physicians are trained by our team members in clinical best practices to optimize referrals and the collection of source documents for patients to be included.

Working Methodology

Quality assurance and standard operating procedures are the method applied throughout the entire research process. Regulatory submissions and data collection are done expeditiously. All tasks are governed by our constantly updated standardized procedures manuals.

The guidelines of the International Conference on Harmonization (GCP/ICH) Good Clinical Practice Guidelines are the basis of our work. Regulatory and ethics committee inspections and sponsor and CRO audits were met with excellent quality results.

Feedback from instructors is a tool for continuous improvement and our best letter of introduction.

Education

In the diabetes area, there are also patient education programs, consisting of six classes taught by the staff; and a cooking workshop, where the center's nutritionists teach patients how to maintain a healthy diet.

Talks open to the community are held once a month on various topics related to chronic diseases. For the city's physicians, workshops on clinical research and insulin therapy are offered.

And retention programs are a successful way to keep participants motivated and engaged within clinical trials.

Agreements

The IIC MDP supports the creation of collaborative links with companies and public and private organizations related to the medical sector, with the objective of forming strategic alliances with companies through research, development and innovation projects in order to support their development.

We have "preferred site" agreements with: Amgen, Novartis, IQVIA and Merck.

Cooperation and collaboration agreements with the Faculties of Medicine of FASTA University and the National University of La Plata, CONICET, the Juan Jara National Institute of Epidemiology, the Health Secretariat of the Municipality of General Pueyrredon, and the Institute of Clinical and Sanitary Effectiveness.
